

Novel Near Infrared Technology Accurately Diagnoses Vascular Disease

Team

Need

Peripheral Arterial Disease (PAD)

- Diabetes, high cholesterol, smoking
- Leg pain when walking
- Detection essential for treatment, but current diagnosis has flaws
- Untreated: amputation, heart attacks, stroke
- High degree of health disparity
- Approximately 6% of the US adult population (40 years or older, or over 7 million people) have PAD. Despite available diagnostic tools, amputation rates for advanced PAD has increased in the past several decades.

OPPORTUNITY

- Ability to offer to a broader population
- Accurate diagnosis at the earliest stages
- Ability to monitor progress with therapy
- Ease of use, fast, inexpensive, and reliable

Research

Table: Subject characteristics.

Variable	PAD N = 21	No PAD N=15
Age (years)	70±8.1	70±7.3
Gender (%)		
Male	67	67
Female	33	33
Diabetes (%)	33	0
Ankle-Brachial Index		
Right PT	0.85 ± 0.28	-
Right DT	0.85 ± 0.30	-
Left PT	0.87 ± 0.25	-
Left DT	0.76 ± 0.21	-
IRX FLOW	46.4 ± 44.6	16.4±7.0

Background

Diabetic vascular disease continues to inflict a high burden of morbidity. Despite available diagnostic tools, **amputation rates for advanced vascular disease have increased** in the past several decades. At the same time, **patients with lower socioeconomic status suffer late diagnosis and more advanced disease on presentation.** Black patients suffer disproportionately higher rates of PAD than other demographic groups, with amputation rates for advanced PAD that are 2-4 times higher. (Bevan, 2020) **The current ineffective strategy for screening involves in-office testing by physicians using ABI testing,** which is underutilized by primary care clinicians, inaccurate in diabetes, and costly for many patients.(Mohler, 2004)

Infrared RX has developed a reliable, non-invasive, and cost-effective diagnostic tool for diagnosing vascular disease.

ABI testing is unreliable for 1 in 4 patients.

Figure: IRX Logic Model Flow chart illustrates implementation of IRX FLOW device in decreasing disparities

Solution

IRX FLOW

- Non-invasive light sensor
- Automated data acquisition platform
- Special training not required
- Ten minutes to test both legs

IRX FLOW versus ABI

Graph: Correlation between IRX FLOW and ABI testing. Pearson correlation = 0.75 (p<0.05).
