Structuring Your Scientific Paper

Jean-luc Doumont, Ph.D.

Jean-luc Doumont, Ph.D., trains scientists, engineers, business people, and other rational minds across the world in effective communication using an original approach that contrasts sharply with traditional methods. In this presentation, he will explain how to structure a paper from the point of view of the readers, not the logic of the authors, to make the paper more compelling and convincing.

Jean-luc is the author of *Trees, Maps, and Theorems*, a critically acclaimed book on effective communication for rational minds, and of the Nature series *English Communication for Scientists* on nature.com.

Friday, February 8, 2013
10 a.m. to Noon - Q & A to follow
Hiatt Auditorium, S1-608

Refreshments will be served
